## Class- $A$ <br> STEREO POWER AMPLIFIER

## A-80

Class A driven output stage with 10-parallel push-pull power MOS-FETs Large linear output of $65 \mathrm{~W} / 8$ ohms, $130 \mathrm{~W} / 4$ ohms, $260 \mathrm{~W} / 2$ ohms, $520 \mathrm{~W} /$ 1 ohm Instrumentation amplifier principle Current feedback amplification circuits Balanced remote sensing MCS+ circuitry High damping factor of 1,000 Speaker output protection Highly responsive large-scale bar graph power meters Supports bi-amping and bridged mode connection

## The ideal stereo power amplifier building on 50-year search for perfection

The A-80 is a Class A power amplifier developed as a stereo amplifier version of our 50th anniversary A-300 model. Optimizing the 10-parallel push-pull power MOS-FETs in the output stage produces an output power of 65 W into 8 ohms, 130 W into 4 ohms, 260 W into 2 ohms, and 520 W into 1 ohm. Rigorous investment into new, cutting-edge noise reduction technologies has achieved a sense of presence and minute expression that rival live performances. The A-80 power amplifier perfectly fuses modern technology with the wealth of knowledge Accuphase has amassed in its pursuit of perfect sonic expression.

## Groundbreakingtechnology

The A-80 employs sophisticated circuitry and hand-selected materials to create a power amplifier with perfectly honed expressiveness.

## Ample output power

The Class A driven 10-parallel push-pull power MOS-FETs in the output stage produce linear output power of 65 W into 8 ohms, 130 W into 4 ohms, 260 W into 2 ohms, and 520 W into 1 ohm.

## High noise performance

Ideal gain distribution and other sophisticated techniques improve noise level suppression by $7 \%$ over conventional models.

## High damping factor

With a damping factor of 1,000 , the speakers can be driven with full control over the counter-electromotive forces to get the most out of your speakers.

## Ideal gain distribution

Allocating a high gain (12.6x) in the signal input section with its superb noise suppression rating drastically reduces output noise.

## - Balanced remote sensing

Balanced remote sensing improves damping factor by feeding back the GND at the same time as the signal output from speaker terminals.

## Instrumentation amplifier

With balanced circuits in the signal input section, the amplification stage is comprised entirely of an instrumentation amplifier principle that equalizes input impedance on the + and - sides for excellent external noise suppression, while providing optimal circuitry for a high-end audio amplifier.

Circuit diagram

## MCS+ circuit

By placing the voltage amplification stage in a two-parallel circuit layout, the MCS+ (Multiple Circuit Summing-up) circuit theoretically reduces the noise floor by about $30 \%$.

2-parallel circuit layout of MCS+ principle

## Current feedback amplification topology

 The current feedback amplification circuit offers exceptional performance in the high range with almost no impact on the frequency characteristics even when gain is switched, resulting in natural and dynamic driving of the speakers.

## Advanced features

- Class A driven 10-parallel push-pull MOS-FET output stage

■ 65 W into 8 ohms, 130 W into 4 ohms, 260 W into 2 ohms, and 520 W into 1 ohm large linear output power

- Instrumentation amplifier
- Current feedback amplification topology
- Balanced remote sensing

MCS+ circuitry

- High damping factor of 1,000
- Meter display switching-(1)
- Digital power meter display switching
- Hold time switching function that changes the meter peak display time
- LINE / BALANCED input switching ...............................(4)
- 4-step gain control
- Polarity switching of balanced input connectors .............(6)
- Bi-amping connection and bridged connection switching...(7)
- Signal input section with a fully discrete configuration for low noise
- Speaker output protection circuit guards against short-circuiting
- Large speaker terminals connected directly to protection circuitry
- Edgewise coils improve damping factor ..........................(1)
- Highly reliable MOS-FET switches with no mechanical connections
- Large, high-efficiency toroidal transformer .....................(13)
- High capacity $120,000 \mu \mathrm{~F}$ filtering capacitors
- Aluminum hairline finish top plate
- Highly responsive large-scale bar graph meters and digital power meters
- High-carbon cast iron insulator feet with superior damping characteristics
- Power amplification section on circuit boards using glass cloth fluorocarbon resin

* See the previous page for information on the controls in the sub panel.

Rear Panel

Speaker terminals (Upper and lower terminals always output the same signal)

Supported spade lug dimensions
 1.3 mm
$\left(0.25^{\prime \prime}\right)$
( $\left.0.74^{\prime \prime}\right)$

BALANCED input terminals - Balanced input phase switch

## A-80 Guaranteed Specifications

| $\begin{aligned} & \text { Rated Output } \\ & (20-20,000 \mathrm{~Hz}) \end{aligned}$ | Load | 8 ohms | 4 ohms | 2 ohms | 1 ohm | Gain | Gain switch | MAX | -3 dB | -6 dB | -12 dB |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | Normal / Bi-amping connection | 0.91 V |  | 0.11 V |  | Mass | Net |  | 44.6 kg | $8.4 \mathrm{lbs})$ |  |
|  | Bridged connection | 1.82 V |  | 0.11 V |  |  | In shipping Carton | 54 kg (119 lbs) |  |  |  |

- The measurement methods for the Guaranteed Specifications comply with JEITA

CP-1301A and IEC 60268-3.

- "Normal connection" indicates standard operation.

## Supplied accessories

- AC power cord

Remarks

* This product is available in versions for 120/220/230 V AC. Make sure that the voltage shown on the rear panel matches the AC line voltage in your area.
$\star$ The 230 V version has an Eco Mode that switches power off after 120 minutes of inactivity.
$\star$ The shape of the plug of the supplied AC power cord depends on the voltage rating and destination country.
